

Marketplace import: Amazon and AliExpress

With the Companion you bring products and orders from Amazon and AliExpress straight into aYOUne, without retyping.

Importing products

On an Amazon product page (amazon.de, .com, .co.uk, .fr, .it, .es) or an AliExpress product page, an In aYOUne importieren (import into aYOUne) button appears. Alternatively click Import product in the popup.

The Companion

- looks for an existing product in aYOUne (by ASIN, EAN, GTIN, UPC or manufacturer part number) and updates it, or creates a new product with the next free article number;

- takes over the product image;

- finds the seller as a supplier or creates one;

- records the price in a supplier agreement. If one already exists, a new entry is added to its price history.

You see the result right away — new product created or product updated — with links to the product and the supplier in aYOUne. If no price can be found on AliExpress, the import finishes without a price.

Importing orders

Amazon: open your order history or a single order. A bar at the top offers to import the orders or this order. The orders visible on the current page are imported; for older orders change the filter or page and click again. Afterwards you see how many orders are new and how many were updated; sellers and products are completed in the background.

AliExpress: on the order list click Import orders. The Companion briefly opens each order in the background to read the details. You can cancel at any time.

Filling in product details

The order list does not show every detail, such as quantity or unit price. When data is missing, the popup shows a product follow-up section with a Fill in now button. The Companion opens the affected product pages in the background and completes the details, 25 products per run with a short pause in between.

Requirements

You are signed in to the Companion and logged in to Amazon or AliExpress with your own account. The Companion reads the pages you see; it does not use a seller interface.

The buttons and messages on Amazon and AliExpress pages are currently shown in German.
